# ExpertusONE Mobile

Improve learner, manager and instructor productivity with the latest innovations in mobile app technology

As the first true mobile LMS app, ExpertusONE Mobile continues to push what's possible in learning on-the-go. Thanks to its Mobile First design, the app offers the latest mobile features and technology, as soon as they're available. Giving users a second to none experience and dramatically improving their productivity.

Train or manage learning on-the-go—native ExpertusONE apps for any Android/Apple device with offline sync and actionable analytics

True Mobile First design—leverages the latest mobile technology, like voice integration and push notifications, for an easier, more productive experience

Robust dashboard views—see what's been accomplished and what needs to be done in seconds, from one personalized screen

Intuitive UI and navigation—zero learning curve; the ultimate productivity improvement tool for learners, managers and instructors
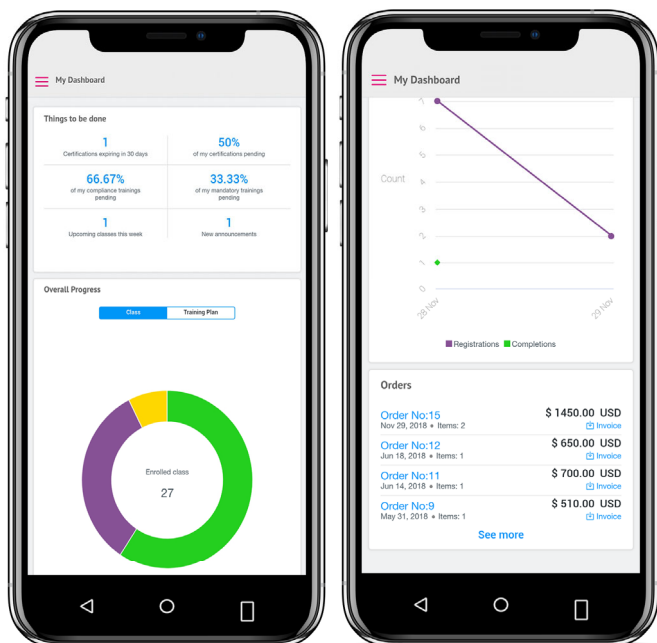

Meet the most advanced, fully featured LMS app available. How ExpertusONE Mobile works.

The ExpertusONE Mobile app makes taking or managing learning incredibly convenient, and actually expands on what you can do with the LMS. When a user logs into the mobile app, the home screen, modules and preferences are all tailored to their role and permissions.

For Learners

ExpertusONE Mobile gives learners a 100% actionable dashboard that helps them stay on top of required learning activities. From just one screen, they can see and act on:

- Pending certifications, compliance and mandatory training

- Upcoming virtual or ILT classes

- Training orders, notifications and announcements

- Training plan progress and activities

Learners also have full access to their training catalog. They can quickly search using keywords, open text and filters, and register, buy and launch training in seconds... right from the app.
To make learning even more convenient, learners can download content to view offline—with full progress sync once they're back online. And, to save storage space, they can enable their app to automatically delete completed training from their devices.

For Instructors

Instructors use the ExpertusONE Mobile app to simplify their work and elevate the classroom experience. Presence Sensing automates class attendance and completion reporting. And class-based collaboration tools engage learners.

The app also solves the problem of low survey completions by allowing instructors to push surveys and assessments to learners during class—gaining valuable insight into course and content effectiveness.
Lastly, instructors can manage their class scheduling via the app's calendar module and sync it to their device. No more conflicts or missed classes.

For Managers

ExpertusONE Mobile empowers managers to be more efficient and effective at their jobs:

- **Streamlined, simplified workflows**—easy to track learners' progress for optional, mandatory and compliance training, on-the-go

- **Actionable analytics**—managers can quickly identify and call, text, email or send automated reminders to non-compliant learners

- **Increased learning completion rates**—with reduced statutory compliance issues

The app can also be used to build team rapport and engagement with pre-populated 'congratulations' texts sent upon training completion.

Trending Technology

ExpertusONE continually adds the latest mobile technology to stay fresh and relevant for users:

- **Voice integration**—search, filtering, location mapping and more

- **Push notifications**—including in-class surveys and evaluations

- **Geofencing**—restricts training to approved hours and/or locations

- **Presence Sensing**—automates/digitizes classroom reporting; no more dreaded sign in sheets

- **Built-in eCommerce**—purchase trainings, add discounts, use multiple payment options/currencies

Social Learning

With meaningful collaboration and social learning tools, ExpertusONE Mobile makes it easy for peers to connect, collaborate and learn together:

- Detect classmates in- and outside of class with fast contact info exchanges

- Show all learner profiles and real-time gamification status

- Support continuous learning to elevate the overall learning experience

Simplified Navigation

Whether you're searching the training catalog or accessing reports, navigating the ExpertusONE Mobile app is quick, easy and secure:

- Option to use pulldown menu or click icons for app navigation; 'Take Tour' function demos all critical app actions

- One click class registration and launch

- Customizable settings and themes, including calendar sync with Outlook and Google and notification blocking for weekends or by category

- Completely secure—cannot open mobile app or view downloaded training without active LMS credentials

Designed for the Digital Transformation

As part of our digital learning platform, the ExpertusONE Mobile app was designed to help global learning organizations usher in the digital transformation. It eliminates paperwork, reduces errors and dramatically improves productivity.
